

SafeTrip KZ - Trusted Travel Platform for First-Time Visitors

1. Project Name

SafeTrip KZ - Trusted Travel Platform for First-Time Visitors.

2. Project Vision

SafeTrip KZ is a centralized and trusted travel platform for tourists who visit Kazakhstan for the first time.

The platform helps remove chaos, risk of scams, and scattered information. It gives only verified tours, safe places, and basic travel information in one system.

3. Project Goals

Business goals

- Create MVP version
- Build scalable architecture
- Prepare system for future monetization (commission and premium placement)

User goals

- Quickly find verified tours
 - See transparent prices
 - Find safe places to visit
 - Save favorite options
 - Feel confident when planning a trip
-

4. Problem

Today tourists:

- search tours in Instagram or Telegram
- meet unverified sellers
- do not understand real prices
- receive fragmented information
- feel stress

There is no single trusted platform for first-time tourists in Kazakhstan.

5. Target Audience

- Foreign tourists
 - Age 20–45
 - English speakers
 - Stay 1–7 days
 - Independent travelers
 - Care about safety
-

6. Personas

Persona 1 - Emily

- 29 years old, Germany
- Visiting Almaty for 5 days
- Afraid of scammers
- Wants nature tours

Needs:

- Clear prices
- Verified guides
- Easy choice

Persona 2 - David

- 40 years old, UK
- Business trip
- Has 2 free days

Needs:

- Fast decisions
 - Ready travel plan
 - English-friendly places
-

7. Product Concept

SafeTrip KZ is NOT a marketplace with thousands of tours.

It is:

- Curated platform
 - Only verified offers
 - Focus on trust
 - Minimal overload
 - Simple and safe experience
-

8. Features

MUST (for MVP)

1. List of verified tours
2. Tour detail page
3. Food & Places section
4. Safety & Info page
5. Registration and login
6. Save to favorites

SHOULD

- Filters (price, duration, city)
- “Verified” badge
- Rating display

FUTURE FEATURES

- Online payment
- Insurance purchase
- Online chat

- Multiple languages
 - AI recommendations
-

9. Full User Scenario

1. User opens homepage
 2. Sees “Verified Tours” block
 3. Opens tour list
 4. Filters by city
 5. Opens tour page
 6. Saves tour
 7. Opens Food & Places
 8. Saves restaurant
 9. Registers account
 10. Views favorites in profile
-

10. Pages List

1. Homepage
 2. Tours list
 3. Tour details
 4. Food & Places list
 5. Place details
 6. Safety & Info
 7. Login / Registration
 8. Profile
 9. 404 page
-

11. Page Specifications

Homepage

Goal: present product and guide users.

Sections:

- Hero section + CTA

- Featured tours
- Featured places
- Why SafeTrip (advantages)
- Footer

API:

- GET /tours?featured=true
 - GET /places?featured=true
-

Tours List

Goal: show all tours with filters.

Components:

- Filter panel
- Cards grid
- Pagination

API:

- GET /tours
 - Parameters: city, duration, priceMin, priceMax
-

Tour Details

Sections:

- Gallery
- Description
- Duration
- Price
- Included items
- Save button

API:

- GET /tours/{id}
-

Food & Places

- Categories
- Place cards

API:

- GET /places
-

Place Details

- Photos
 - Description
 - Average price
 - Save option
-

Safety & Info

Static info:

- Emergency numbers
 - Transport
 - SIM cards
 - Culture
-

Login / Registration

- Email
 - Password
 - JWT authentication
-

Profile

- Saved tours
- Saved places

API:

- GET /users/{id}/favorites
-

12. System Logic

Frontend → REST API → Backend → Database

Main database entities:

- Users
- Tours
- Places
- Categories
- Favorites

Example API:

- GET /api/tours
 - GET /api/tours/{id}
 - GET /api/places
 - POST /api/auth/register
 - POST /api/auth/login
 - POST /api/favorites
-

13. Designer Tasks

Designer must create:

- Desktop and mobile versions
- All pages
- States:
 - Loading
 - Empty
 - Error
 - Not logged in

UX priorities:

- Clean design
- Simplicity
- Visible price
- Trust badge

14. Backend Tasks

- Create database schema
 - Implement REST API
 - JWT authentication
 - Favorites logic
 - Filtering
-

15. Frontend Tasks

- Routing
 - API integration
 - Authorization
 - Components:
 - TourCard
 - PlaceCard
 - FilterPanel
 - Navbar
 - AuthForm
-

16. QA Plan

Check:

- Registration
- Login
- Filters
- Saving favorites
- Empty states
- API errors

Edge cases:

- No tours
- Server error
- Duplicate favorites

17. Risks

- Too large project scope
 - Trying to add payments too early
 - Overloaded design
 - Complex architecture
-

18. MVP Technical Simplifications

Filters

Included:

- city filter
- fixed duration filter

Not included:

- price range filters
 - complex combinations
-

Authorization

Included:

- JWT access token
- Email + password login
- Token stored on client
- Protected pages

Not included:

- refresh tokens
 - social login
 - password recovery
-

Favorites System

Separate tables:

- favorite_tours
- favorite_places

Simpler logic for junior developers.

Categories

Stored as text field instead of separate table.

Example:

Restaurant | Cafe | Viewpoint

Pagination

- limit 30 items
- “Load More” button

No full pagination system.

Content Management

Tours and places added manually.

No admin panel in MVP.

Recommended Database Structure

Users

- id
- email
- password_hash
- created_at

Tours

- id
- title
- description
- city
- duration
- price
- rating
- image_url
- is_featured

Places

- id
- title
- description
- category
- average_price
- rating
- image_url
- is_featured

Favorite_Tours

- id
- user_id
- tour_id

Favorite_Places

- id
- user_id
- place_id
